Letter "10R" indicates resistance value $10 \Omega$.

### 2.4 Tolerance:

It is measured by Bridge-method at room temperature and expressed by a capital letter.
$\mathrm{F}= \pm 1 \%$; $\mathrm{G}= \pm 2 \%$; $\mathrm{J}= \pm 5 \% ; \mathrm{K}= \pm 10 \%$.
2.5 Package/Terminal Form:

※ Remark : FRNF Series Resistors are RoHS Compliant .
3. Rated Power:

Rated power is the value of Max load wattage specified at the ambient temperature of $70^{\circ} \mathrm{C}$, and shall meet the functions of electrical and mechanical performance. When the ambient temperature surpasses above mentioned temperature, the value declines as per following DERATING CURVE.

### 3.1 Rated Voltage:

It is calculated through the following formula:
where $\quad E$ : rated voltage $(V) \quad P$ : rated power (W) $\quad R$ : nominal resistance value $(\Omega)$

$$
E=\sqrt{P^{*} R}
$$

However, in case the voltage calculated exceeds the maximum load voltage, such the maximum load voltage shall be regarded as its rated voltage, means whichever less.
4. Dimension and structure:
4.1 Dimension:

Notes : 1. Max Overload Voltage is 2 times of Max Working Voltage.
2. UL approval : FRNF $1 / 2 \mathrm{~W}$ series.
4.2 Structure:
4.2.1 Terminal:

Terminal is to be firmly connected with resistors element, both electrically and mechanically, and allow easy soldering.
4.2.2 Coating:

Coating is done dark gray flameproof paint for FRNF (resistant to $800^{\circ} \mathrm{C}$ )which is solid enough to be free from looseness, crack and easy breakage. It is also resistant to cleaning and industrial solvents, and the paint shall be limited within 2 mm of lead wires from resistor body.

### 4.2.3 Marking:

Marking is made on resistors surface by five colors coding.
1st, 2nd, 3rd:nominal resistance.
4th:tolerance.
5th:black for fusible resistors.
5. Fusing Characteristics:

| Resistance Range | Fusing Power |
| :---: | :---: |

| $10.1 \Omega \sim 10 \mathrm{~K} \Omega$ |  |
| 10.1K $\Omega \sim 100 \mathrm{~K} \Omega$ |  |
| Note: |  |
| - Fusing time can also be consulted between buyers and the manufacturer before producing. Fusing time is within 60 sec . |  |
|  |  |  |
| The resistance value will be as high as 100 times the original value after fusing. |  |

6. Operating Temperature Range: $-55^{\circ} \mathrm{C} \sim 155^{\circ} \mathrm{C}$
7. Mechanical Performance
7.1 Terminal tensile:

To fix the resistor body, a static load of 2.5 kgs .(FRNF $1 / 2 \mathrm{~W}: 1 \mathrm{~kg}$ ) is to be gradually applied into the terminal for 10 seconds without causing any looseness and fall.
7.2 Twist withstand:

To bend the lead wire at the point of about 6 mm from resistor body to $90^{\circ}$, then catch the wire at 1.2 $\pm 0.4 \mathrm{~mm}$ apart from the bent point end and turn it (clockwise) by 360 degrees perpendicular to the resistor axis at speed of 5 seconds per turn, and do the same counterclockwise again which constitute a whole turn. Repeat the turn 2 times without causing any break and looseness.
8. Electrical Performance:
8.1 Resistance Temperature Coefficient:

It shall be within $\pm 200 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$.
$\mathrm{T} . \mathrm{C}\left(\mathrm{ppm} /{ }^{\circ} \mathrm{C}\right)=\left[(\mathrm{R} 2-\mathrm{R} 1) \div \mathrm{R} 1 〕 \times[1 \div(\mathrm{T} 2-\mathrm{T} 1)] \times 10^{6}\right.$
where $\quad$ R1: resistance value at reference temperature
R2: resistance value at test temp.
T1: reference temp. (usu. $25^{\circ} \mathrm{C}$ )
T2: test temp. (about $75^{\circ} \mathrm{C}$ )

The similar cycle will be repeated for $1000_{-0}^{+18}$ hours in total (including cut-off time). Then remove the voltage, taking the resistors out of the oven and leaving them at room temp. for one hour. The resistance value change rate between pre-and-post test shall be within $\pm 5 \%$.
