Aillen Electronic Technology	Radial aluminum electrolytic capacitor	Aillon
Limited	CD11CT Series	Amen

2.6 **<u>Products Series Code</u>**

Code	C1
Series	CD11CT

2.7 Diameter

Code	С	D	E	F	G
Diameter	4	5	6.3	8	10

2.8 Case length

- (1) When the code is number, it represent the actual height.(e.g. The code 07 indicates that the height is 7mm; The code 10 indicates that the height is 10mm)
- (2) When the code is number + alphabet, please check the following the table:

Code	1A	1B	1C	1D	2A	3 A
Case Length(mm)	11.5	12.5	13.5	14.5	21.5	31.5

2.9 Packaging

Code	RR	R2	T2	TB	Т3	T5
Packaging	Bulk	F8,Lead Pitch=2. 5mm, Bulk	Lead Pitch=2.0mm Taping	Lead Pitch=2.5mm Taping	Lead Pitch=3.5mm Taping	Lead Pitch=5.0mm Taping
Code		Τ7	CA	СВ	CC	CD
LeadPackagingPitch=7.5mmTapingTaping		Cutting the feet long=3.0mm	Cutting the feet long=3.5mm	Cutting the feet long=4.0mm	Cutting the feet long=4.5mm	

Note: The length of the product's cut feet starts from A=3.0mm. Every time it increases by 0.5mm, the English word is pushed forward one place, as shown in the following table:

Cutting length(mm)	Code
3.0±0.5	CA
3.5±0.5	CB
4.0±0.5	CC
4.5±0.5	CD
5.0±0.5	CE
6.0±0.5	CG
And so on	

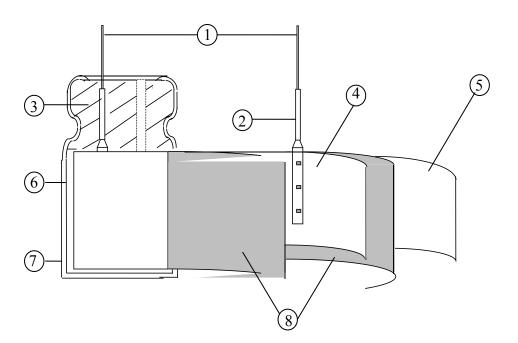

2.10 Suffix: Inner Code

STANDARD MANUAL						

Aillen Electronic Technology Limited	Radial aluminum electrolytic capacitor CD11CT Series	Aillen

3. Construction:

Single ended type to be produced to fix the terminals to anode and cathode foil, and wind together with paper, and then wound element to be impregnated with electrolyte will be enclosed in an aluminum case. Finally sealed up tightly with end seal rubber, then finished by putting on the vinyl sleeve.

No	Component	Material
1	Lead line	Tinned CP wire (Pb Free)
2	Terminal	Aluminum wire
3	Sealing Material	Rubber
4	Al-Foil (+)	Formed aluminum foil
5	Al-Foil (-)	Etched aluminum foil or formed aluminum foil
6	Case	Aluminum case
7	Sleeve	PET
8	Separator	Electrolyte paper

Revision B				Page	17

When using Aluminum Electrolytic Capacitors, please pay attention to the points listed below.

If the following types of electrical loads are applied to Aluminum Electrolytic Capacitors,

rapid deterioration of electrical property occurs:

-Reverse voltage

-Over voltage exceeding rated working voltage

-Current exceeding rated ripple current

-Severe charging/discharging

At such times, severe heat is generated, gas is emitted, then electrolyte leaks from the sealed area, and pressure relief vent operates due to increase of internal pressure. In the worst case, explosion or igniton may occur, and along with destruction of the capacitor combustibles may burst out.

1.CAUTION DURING CIRCUIT DESIGN

1)OPERATIONAL ENCIRONMENT, MOUNTING ENVIRONMENT AND CONDITIONS

Ensure that operational and mounting conditions follow the specified conditions detailed in the catalog and specification sheets

2)OPERATING TEMPERARURE, RIPPLE CURRENT AND LOAD LIFE.

Operating temperature and applied ripple current should be within the specified value in the catalog or specification sheets.

Do not use Aluminum Electrolytic Capacitors at temperature which exceeds the specified category temperatures range.

Do not apply excessive current to the capacitors, which exceeds the specified rated ripple current.

During circuit design ,please ensure that capacitors are selected to match with the lifetime requirements of the application

3)APPLICATION

Aluminum Electrolytic Capacitors are normally polarized .Reverse voltage or AC coltage should not be applied.When polarity may flip over,non-polar type should be used,but the non-polar type cannot be used for AC.

Standard Aluminum E lectrolytic Capacitors are not suitable for rapid charge and discharge applications.Please consult with Shanghai Suzuki Electronics or sales office of Suzuki Techno Group in your area about special designed capacitors for rapid charge and discharge.

4)APPLIED COLTAGE

Do not exceed the rated voltage of capacitors

5)INSULATION

Aluminum Electrolytic Capacitors should be electricially isolated from the following.

Aluminum case, cathode lead wire, anode lead wire and circuit pattern;

Auxiliary termianls of snap-in type, anode terminal, outward terminals and circuit pattern.

The PVC sleeve of Aluminum Electrolytic Capacitors is not recognized as an insulator, and therfore,

the standard capacitor should not be used in a place where insulation function is needed.

Issued-date: 2022-11-05	Name	Specification Sheet – CD11CT					
Revision	В		Page	18			
STANDARD MANUAL							

Please consult with Shanghai Suzuki Electronics or sales office of Suzuki Techno Group in your area, if you require a higher grade of insulating sleeve.

6) CONDITIONS OF USE

The following environments should be avoided when suing Aluminum Electrolytic Capacitors. Damp conditions such as water ,salt water or oil spray or fumes, high humidity or humidity condensation situations;.

Hazardous gas/fumes such as hydrogen sulfide, sulfurous acid gas, nitrous acid, chlorine gas, ammonia or bromine gas;

Exposure of ozone ,ultraviolet rays or radiation;

Severe vibration or shock which exceeds the cinditon specified in the catalog or specification sheets.

7) CONSIDERATION TO ASSEMBLY CONDITION

In designing a circuit ,the following matters should be ensured in advance to the capacitor's assembly on the printed circuit board (PC board)

Design the appropriate hole spacing to match the lead pitch of capacitors;

Do not locate any wiring and circuit patterns directly above the capacitor's vent;

Ensure enough free space iabove the capacitor's vent. The recommended space is specified in the catalog or specification sheets;

In case the capacitor's vent is facing the PC board, make a gas release hole on PC board.

The sealing side of the screw terminal type should not face down in the application. When the capacitors are mounted horizontally, the anode screw terminals must be positioned at upper side..

8) CONSIDERATION TO CIRCUIT DESIGN

Any copper lines or circuit patterns should not be laid under the capacitor;

Parts which radiate heat should not be placed close to the reverse side of the Aluminum Electrolytic Capacitors on the PC board.

9) OTHERS

Performance of electrical characteristics of Aluminum Electrolytic Capacitors is affected by variation of operating temperature and frequency.Consider this variation when deaigning the circuit.

Excessive holes and connection hole between both sides on the PC board should be avoided around or under the mounting area of the Aluminum Electrolytic Capacitors on double sided or multilayer PC board.

Torque of tightening screw terminals should not exceed the specified maximum valu which is described in the catalog and specification sheets .

Consider current balance when 2 or more Aluminum Electrolytic Capacitors are connected in parallel.

Use bleeding resistors when 2 or more Aluminum Electrolytic Capacitors are connected in series .In this case, the resistors should be connected parallel to the capacitors.

2. CAUTION FOR ASSEMBLING CAPACITORS

1) CAUTION BEFORE ASSEMBLY

Aluminum Electrolytic Capacitors cannot be recycled after mounting and applying electricity in unit. The capacitors, which are removed from PC board for the purpose of measuring electrical characteristics at the periodical inspection, should only be recycled for the same pisition.;

Aluminum Electrolytic Capacitors may accumulate charge naturally during storage. In this case, discharge through a 1KOHM resistor before use;

Leakage current of Aluminum Electrolytic Capacitors may be increased during long storage time. In this case, the capacitors should be subject to voltage treatment through a 1KOHM resistor before use.

2) IN THE ASSEMBLY PROCESS-1

Ensure rated voltage and capacitance of the capacitors before mounting;

Ensure capacitors polarity before mounting;

Do not use a capacitor which has been dropped onto a hard surface;

Do not use a capacitor with damaged or dented cased or seals.

3) IN THE ASSEMBLY PROCESS-2

Capacitors should be mounted after confirmation that hole spacing on PC board matches the lead pitch of the capacitors;

The snap-in type of capacitors should be mounted firmly on the PC board without a gap between the capacitor body and the surface of PC board;

Avolsd excessive force when clinching lead wire during auto-insertion process;

Avoid excessive shock to capacitors by automatic inserting machine, during mounting, parts inspection or centering operations;

Please utilize supporting material such as strap of adhesive to mount capacitors to PC board when it is anticipated that vibration or shock is applied.

4) SOLDERING

Soldering conditions (temperature,time)should be within the specified conditions which are described in the catalog or specification sheets;

In case lead wire reforming is needed due to inappropriate pitch between capacitor and holes on PC board,stress to the capacitor should be avoided;

In case of maintenance by soldering iron, if it is required to detach the capacitor, it should be removed from PC board after solder has melted sufficiently in order to reduce stress on the lead wires/terminals of the capacitor;

Soldering iron should never touch the capacitor's body.

Issued-date: 2022-11-05	Name	Specification Sheet – CD11CT					
Revision	В		Page	20			
STANDARD MANUAL							

5)FLOW SOLDERING

Do not dip capacitor's body into melted solder,.It should only be soldered on the reverse side of the PC board on which the capacitors are mounted;

Soldering condition((preheat,soldering temperature,dipping time)should be within the specified standard which is described in the catalog or specification sheets;

Flux should not be adhered to capacitor's body but only to its terminals;

Other devices which are mounted close to capacitors should not touch the capacitors.

6) **REFLOW SOLDERING**

Reflow soldering conditions(preheat,soldering,temperature,reflow time)should follow the specified standard which is described in the catalog or specification sheets;

Heating standard should depend on surface of the capacitor color or materials when infrared rays are used because the capacitor's heat absorption depends on the surface color or materials.Check heat condition; Standard Aluminum Electrolytic Capacitors cannot withstand two or more reflow processes.

7) HANDLING AFTER SOLDERING

Do not bend or twist the capacitor's body after soldering on PC board;

Do not pick-up or move PC board by holding the soldered capacitors;

Do not hit the capacitors and isolate capacitors from the PC board or other device when stacking PC boards in store.

8) PC BOARD CLEANING

Standard Aluminum Electrolytic Capacitors should be free from halogenated solvents during PC board cleaning after soldering.

9) ADHESIVES AND COATNG MATERIALS

Do not use halogenated adhesives and coating materials to fix Aluminum Electrolytic Capacitors; Flux between the surface of the PC board and sealing of capacitors should be cleaned before using adhesives or coating materials;

Solvents should be dried up before using adhesives or coating materials;

Do not cover up all the sealing area of capacitors with adhesives or coating materials,make coverage only partial.

STANDARD MANUAL							

3. CAUTION DURING USE OF CAPACITORS IN SETS

- 3.1 Do not touch the terminals of capacitors;
- 3.2 Do not connect electrical terminals of the capacitors.Keep the capacitors free from conductive solution, such as acid, alkali and so on;
- 3.3 Ensure the operational environment of the equipment in which the capacitor has been built is within the specified condition mentioned in the catalog or specification sheets.

4. MAINTENANCE

- 4.1 Periodical inspection should be carried out for the capacitors, which are used with industrial equiment; Check the following points at the inspection.
- 4.2 Visual inspection to check pressure relief vent open or leakage of electrolyte;
- 4.3 Electrical characteristics:leakage current,capacitance,dissipation factor and the other points which are mentioned in the catalog or specification sheets.

5. EMERGENCY ACTION

- 5.1 If the pressure relief vent is open and some gas blows out from the capacitor, turn the main switch of the eauipment off or pull out the plug from the power outlet immediately;
- 5.2 During pressure relief vent operation, extremely hot gas(over 100°C) may blow out from the vent area of the capacitors. So keep your face and skin away from capacitors during its operation. In case of eye contact, flush the open eye(s) with large amount of clean water immediately. In case of ingestion, gargle with water immediately, and do not swallow. Also do not touch elctrolyte but wash skin with soap and water in case of skin contact.

6. STORAGE CONDITIO

- 6.1Aluminum Electrolytic Capacitors should not be stored in high temperature or in high humidity. The suitable storage condition is 5℃-35℃, and less than 75% in relative humidity;
- 6.2Aluminum Electrolytic Capacitors should not be stored in damp conditions such as water, salt water spray or oil spray;
- 6.3Do not store Aluminum Electrolytic Capacitors in an environment full of hazardous gas (hydrogen sulfide gas,sulfurous acid gas,nitrous acid,chlorine gas,ammonia or btomine gas);
- 6.4 Aluminum Electrolytic Capacitors should not be stored under exposure to ozone ,ultraviolet rays or radiation.
- 6.5 After one year, a capacitor should be reconditioned by applying rated voltage in series with a 1000Ω current limiting resistor for a time period of 30 minutes.

7. DISPOSAL

1)Please take either of the following actions in case of disposal.

Incinerarion (high temperature of more than 800°C)after crushing the capacitor's body;

2)Consignment to specialists of industrial waste.
